Robinhood Position Actions

Generated: June 21, 2026. Scope: non-Agentic Robinhood accounts only. Ignored symbol: AABAZZ. No trades were placed or prepared for execution.

Executive Summary

The analysis combines Robinhood account/position data with MySQL HA trend, recent signal, recommendation basket, option recommendation, and synced basket-position tables.

The current recommendation basket was updated June 20, 2026 at 05:55. HA trend inputs are current through June 18, 2026. Robinhood equity quotes are from June 18, 2026 after-hours.

Best overall posture: hold broad-market ETF exposure, avoid adding to weak or unsupported holdings, monitor options risk, and use the current basket for future replacement candidates rather than forcing immediate changes.

Account-Level Actions

Account	Positions Reviewed	Best Action
My Trading 0302	None after ignored symbol filter	No action.
My Investments 1512	SPY, IVV, SLV, MSFT	Hold SPY/IVV; reduce duplicate exposure only if rebalancing. Avoid adding MSFT. Review or trim SLV because no MySQL signal was available and price is below cost.
Individual managed 1832	None	No action.
Traditional IRA 0097	IVV, NVDA, short NVDA call from DB sync	Hold IVV. Hold and monitor NVDA, but avoid new adds until daily signal improves. Review short call risk because upside exposure is capped.
Roth IRA 9459	Short puts from DB sync: APH, HOOD, USB	Hold and monitor. HOOD, APH, and USB have bullish HA/options signals. USB is closest to its strike and deserves the most attention.

Position-Level Signals

Symbol	Account	Signal Read	Suggested Action
SPY	My Investments	Daily SELL, weekly BUY, monthly uptrend; not in current recommendation basket.	Hold. Do not add. Consider trimming only for concentration or rebalancing.
IVV	My Investments; Traditional IRA	Similar to SPY: weekly BUY and longer trend strength, with daily short-term weakness.	Hold as core exposure. Do not add right now.
SLV	My Investments	No HA/reco rows found in MySQL for this symbol.	No model-backed buy signal. Reduce/watch unless intentionally held as silver exposure.
MSFT	My Investments	Daily SELL, weekly mixed, monthly weak; not in current basket.	Avoid adding. Consider reducing if following the model strictly.
NVDA	Traditional IRA	Daily SELL, weekly BUY, long-term strong; not in current basket.	Hold and monitor. Protect gains; avoid adding until daily signal turns constructive.
APH short put	Roth IRA	Daily and weekly BUY; reco_options supports SELL PUT.	Hold/monitor.
HOOD short puts	Roth IRA	Current basket rank 6; daily and weekly BUY; bullish options signal.	Hold/monitor.
USB short put	Roth IRA	Daily and weekly BUY; underlying close near 57.50 strike.	Hold but monitor closely; candidate to roll or adjust if weakness appears.

Current Recommendation Basket Context

Rank	EQ Symbol	ETF Symbol	Common Signal	Note
1	GEV	QQQM	BUY / BUY	Top current basket names; not currently held in reviewed accounts.
2	CFG	JEPQ	BUY / BUY	Replacement candidates if redeploying capital.

Rank	EQ Symbol	ETF Symbol	Common Signal	Note
3	TER	FLQL	BUY / BUY	Both remain approved basket holds pending approval status.
4	HWM	IYF	BUY / BUY	Fresher signals than several held legacy positions.
5	ETR	USPX	BUY / BUY	USPX daily SMA trend is DOWN, so size conservatively.
6	HOOD	XMMO	BUY / BUY	HOOD aligns with Roth short-put bullish posture.

Important Limits

Robinhood automation can place real equity orders only in the Agentic account. The accounts in this report are analysis-only from the available connector.

Option-position details came from the MySQL synced basket-position table, not directly from a live Robinhood option-position endpoint in this session.

Stored procedures reco_backtest, reco_basket_refresh, reco_invest, reco_options, and reco_trade were inspected but not executed to avoid mutating recommendation tables during reporting.

This is decision support, not financial advice. Use explicit approval before any future trade review or order placement.
